

G51FSE - Exam Questions from Testing / Maintenance Phases

1. Describe each of the following testing processes

- a. Unit testing
- b. Integration testing
- c. Release testing
- d. Acceptance testing
- e. User testing

[5 marks]

2. The role of release testing is fundamentally different to integration and unit testing.

i) Describe the primary role of the release testing team.

[1 mark]

ii) Give three reasons why release testing and integration/unit testing are different.

[3 marks]

3. A common software engineering mistake is to presume that acceptance testing should only happen at the end of the project. Describe how the principle of acceptance testing should be considered differently to maximise Software Quality.

[3 marks]

4. Describe Continuous Integration and when it might be used

[2 marks]

5. Companies often have to produce software for different platforms, and different version histories of operating systems. Describe how Configuration Management can be used to generate software for different versions of Android (or iOS).

[3 marks]

6. Identify and describe the 3 different types of changes we might expect in the Maintenance (sometimes called Evolution) of Software.

[6 marks]

7. Explain Requirements Change Management, and why it is important in the Maintenance of Software

[5 marks]
